DOCUMENT CAPTURE

PeriCAPTURE

PeriCAPTURE by eCapture is one of the most affordable, easy-to-use, and innovative document capture solutions available in the market today. It allows you to implement both a production-level and Internet-distributed capture system. eCapture is also a modular system that offers concurrent user pricing. Unlike many scanning solutions, eCapture does not meter your usage. Therefore, it won't shut down at those heavy production times because you've exceeded a monthly allotment of scans. There's no monthly cap to the number of scans you

DOCUMENT CAPTURE

PeriCAPTURE

PeriCAPTURE by eCapture is one of the most affordable, easy-to-use, and innovative document capture solutions available in the market today. It allows you to implement both a production-level and Internet-distributed capture system. eCapture is also a modular system that offers concurrent user pricing. Unlike many scanning solutions, eCapture does not meter your usage. Therefore, it won't shut down at those heavy production times because you've exceeded a monthly allotment of scans. There's no monthly cap to the number of scans you can produce so you're free to grow without concern for increased cost. By using ecNet, you can scan documents anywhere in the world and then send those images over the Internet back to a central site. This is a true, browser-based, Internet-distributed system, not just a data link.

ecIndex ensures the productivity and efficiency of the indexing operator - saving both time and money by providing an easy-to-use method to manually index and file documents

ecNet lets you easily deploy distributed document scanning and indexing at remote locations using the Internet or your corporate intranet.

ecAutoFile Server is a simple, software-based solution that uses bar code technology to file images directly into your document management or workflow system.

ecImport Server allows you to import images from applications such as: incoming faxes, images from microfiche conversions, images from multi-function copiers, and images scanned using third-party software.

ecCommit Server gives you the option of scheduling when documents are committed into your document management or workflow system.

FORM PROCESSING

PeriFORM

A highly scalable form processing module that automates and capture data from many hard-to-read forms and eliminate the associated manual data-entry tasks. Available in a single station with one verification seat, up to a complete network with many scanners, recognition stations, and

as many verification operators as are required. It can distribute work to many PC stations for scanning, recognition, verification and data export. It is also Internet enabled, so that remote processing is possible over private or public networks.

PeriFORM by award winning **Ceresoft** also has an optional flexible user interface that makes adding or modifying existing jobs easy. It supports all major SCSI and ISIS and Twain compatible scanners. Has a unique design module that provides a wizard to guide users through the design of these templates. This module also automatically accomplishes form identification, form registration, auto deskew, rotate, and inversion, so that correct and clean data images are extracted for recognition.

Cere

Includes an excellent recognition engine as well; it recognizes both handwritten and machine-printed words simultaneously and automatically. It also recognizes OMR, barcodes, logos, and form identities. Has ability to export the extracted data in either ASCII text format or any ODBC compliant database format. An additional optional module allows you to export data to multiple databases in multiple formats. It also allows you to export data to spreadsheets, EDI (electronic data interchange) or web-form format. Ideal for an enterprise environment.

DOCUMENT MANAGEMENT

PeriDOC

A highly scalable and comprehensive document management module, **PeriDOC** by **Docuware** allows all types of documents to be captured, indexed, viewed and printed on. This popular module allows you to handle and administer all kinds of different scanned documents and Windows documents. The trademarks of this universal PC software are its completeness, easy integration, simple operation and reliability.

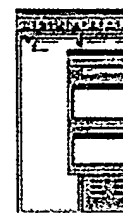

Doc

PeriDOC allows you to Capture, index and store documents in paper form offers multiple-user access to file and search cabinets in seconds, make document annotation with overlay techniques. It has an integrated MAPI interface, integrated FAX function, ad-hoc workflow ability. Contains an optimized TIFFMAKER for the fully automatic storage of Windows documents and an integrated client/ server database based on MS SQL 7. Documents which are stored with **PeriDOC** are protected against any unwanted manipulation. This security feature is based on a sophisticated check sum mechanism which uncovers any violations of the document integrity.

PeriPORTAL

A superior solution for corporate dashboard site, content searching and team collaboration. Bulid on top of Microsoft Sharepoint Portal and seamlessly integrated with the Microsoft Exchange 2000, this web-enabled solution is a module designed for knowledge worker to easily find, share and push information.

Mic

With **PeriPORTAL**, you are able to utilize existing information effectively, and to capture information in new ways that make sense for your business. It facilitates finding, creating, and sharing all of your mission-critical data from a browser-based interface. And because it is comprised fully of Web Parts, it can be easily customized for your business needs. With Web Part technology, you can also customize this interface, managing common resources, such as your contacts, calendars, and messages.

PeriPORTAL includes features like document locking, versioning, and publishing and makes these features accessible to the average user. It delivers easy-to-use, document-management features that are integrated with the tools and applications that are used to create and manage documents, with Microsoft Windows® Explorer and Microsoft Office 2000 applications like Microsoft Word, Microsoft Excel, and Microsoft PowerPoint®. You can also save and check documents into the document store, capturing business-relevant metadata in Document Profile forms. You can also tailor forms to your organization. Tracking changes through multiple drafts as a document is edited, reviewed, and approved is accomplished using integrated approval routing. This occurs prior to publishing for public viewing on the intranet dashboard site. You can also roll back to a previous version of a document.

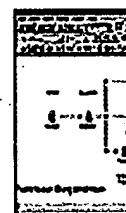

With **PeriPORTAL**, you have the power of Microsoft's robust search technologies to create an intranet site that lets you easily access key content from a broader set of enterprise information. In addition to having one comprehensive place in the portal to search, you can also set the portal to have information come to you with information subscription-directly delivering new and changed content notifications.
